## PAPER DRILLING MACHINES

- *Single/multi-spindle (up to 5 drilling heads)*
- *With fixed or sliding table for paper sizes up to DIN A3*
- *Sliding table with programme shaft for up to 6 adjustable hole centres*
- *With manual or automatic spindle stroke*
- *Available as either bench version or with height-adjustable stand*
- *Automatic waste disposal of paper chips from every drilling head*
- *Models to suit all applications*

PB 1006

All Stago Drilling Machines are CE approved and have the strict German G.S. Certification.

# PRESSROOM SAFETY

*Justrite Production Containers Help You Handle Flammable Liquids and Solvent Laden Cloth Wipes Safely and Economically*

## JUSTRITE OILY WASTE CANS

299-M9100 (22.7 litres)  
299-M9300 (37.8 litres)  
299-M9700 (79.5 litres)

An oily waste can is essential whenever solvent cloths and wiping rags are used. A Justrite Oily Waste Can from Hudson's remains closed when not in use. When operated by the hand or foot lever opening device, the cover opens up to an angle of not more than 60 degrees and closes automatically when released.

Its round construction and elevated bottom encourage circulation of air around the can to disperse heat and prevent spontaneous combustion. A one-piece cover facilitates the use of garbage bags to easily remove waste matter.

## JUSTRITE PLUNGER CANS

299-M10208 (1.89 litres)  
299-M10308 (3.79 litres)

The Justrite Plunger Can helps you quickly and easily moisten cleaning cloths or wipes. Pushing down on the plunger fills the upper pan for moistening. Surplus liquid drains safely back into reservoir. The perforated pan screen also serves as a flame arrester. Top rims have moulded edge protectors for smooth, trouble-free moistening while the pump assembly is of a brass construction. Made of a heavy gauge metal, a Justrite Plunger will last for years

# METALLIC INKS

## Unipak SuperLitho Gold & Silver Inks

- Higher gloss
- Real metallic lustre
- Excellent colour consistency
- Dependable can stability
- Dense pigmentation

### TECH TIP #3 PAPER DRILL BITS

Hollow metal drills will break...

Laminated paper, plastic covers and very hard boards create a great deal of friction, quickly heating up a metal bit. In turn, the substrate can melt, which adheres to inside the bore as well as outside the bit. This accelerates even further the friction/heat. Before long the bore is jammed, sheets start to stick together, the drill bit breaks and production ceases.

#### Solutions to minimise the problem:

1. Use a tungsten carbide drill bit.
2. Ensure the bit is sharp.
3. Use wax paper before and frequently during drilling.
4. Remove clogged waste regularly using a Hudson chip remover.
5. Reduce drilling speed.

Wax Paper (100). Code: 614-9444  
Hudson Chip Remover. Code: 233-9600
