3M Dampener Sleeves Available in cartons of six sleeves	For rollers specially designed for 3M sleeves	Non woven synthetic fibres Lint free	<ul style="list-style-type: none"> • Won't crack, distort, stretch curl or shrink (after initial shrinkage) • Precise water control

Magic Green

Elasticised Anti Marking Nets for Transfer Cylinders.

Available To Suit Heidelberg MO and Speedmasters 72, 74 & 102

Magic Green the Competitive Alternative

TECH UPDATE

Thermography

Raising Print in Gold & Silver Using Non-Metallic Powders

Many printers have been discouraged from printing with traditional metallic gold and silver powder because of the problems that can arise.

These include spotting and the difficulty of cleaning all traces of the metallic powder from the machine when changing from gold to clear printing.

The use of Faust Pearlescent Powders eliminates these problems and has encouraged many printers to thermograph in gold and silver.

Faust Pearlescent gold, non-metallic brass and silver powders can be used in conjunction with rubber based or standard oil inks to give a smooth, bright thermographic finish, without the unevenness or spotting problems normally associated with conventional metallic gold and silver powders. There is no need to use metallic inks with these powders.

Non-metallic, gold and silver powders have the following advantages:

1. Smooth, bright golden thermography.
2. The shade can be varied by changing the colour of the base ink.
3. Is almost completely transparent, minimising problems of spotting on unprinted areas.
4. Does not tarnish or set off.
5. Easy to change back to clear powders.

Faust Pearlescent Powders are manufactured using the same Hi-Flo base resin, well known for its consistency and superior flow qualities.

A special pigment, similar to that used in car paint finishes, is added prior to the anti-static treatment. This minimises the risk of spotting on unprinted areas, but because they are almost completely transparent, any unwanted spots are scarcely visible. This means the non-image area is cleaned fully and there is no pin holing in the thermo finish. This is not always possible with metallic powders.

In addition, Faust Pearlescent Powders do not present any serious problems if traces are left in the powder system when switching powders.

Faust Kleenayd will aid a quick changeover of powders and reduce static electricity on the machine. For technical details on this product refer to the February 2000 issue of Hudson's Good Impressions.

The Stack Wagon

- Move up to 20,000 sheets in one go
- Australia's top paper trolley
- Available in A3 and A4 sizes
- Optional removable work bench
- Available in red, blue or grey
- Made in Australia

5 Year Warranty

Hudson's Expanded Product line

Now Available

- Clear & Coloured Covers
- Plastic Spirals
- Pouch & Roll Laminating Film
- Thermal Binding Covers
- Velobind Strips
- Plastic Combs
- Comb Compatible Wire
- 2:1 & 3:1 Pitch Wire
- Stitching Wire

REACH FOR THE GREEN

When You Want Your Rollers ^{Really} Clean!

**Non
Hazardous**

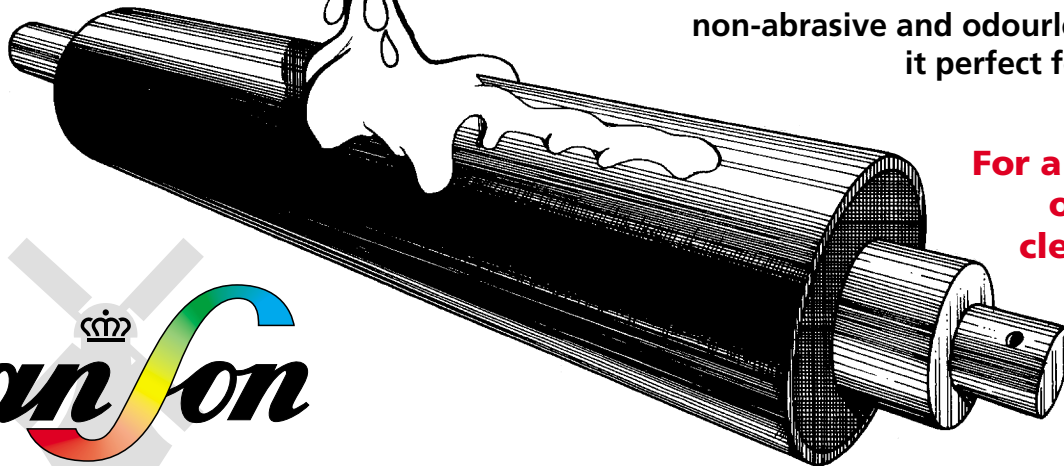

Van Son's **EASY STREET** is a concentrated gel cleanser that deep cleans, deglazes and conditions rollers and blankets at the one time because it works by extraction not dilution. Being non-abrasive it won't damage rollers and is environmentally sound. *You'll notice the difference after just one use!*

One application is all it takes to switch from one colour to any other colour without dripping or waste. Eliminates the need for a colour wash-up.

EASY STREET is non-flammable, non-toxic, non-abrasive and odourless which makes it perfect for everyday use.

For a FREE SAMPLE of the best gel cleaner for dirty rollers, FAX us today on your company letterhead.
