**Are you using Copyrapid plates?
Do you know they are being phased out?**

XANTÉ & LASERLINK GIVE YOU A GREAT ALTERNATIVE

Hudson's has been selling Agfa Copyrapid plates for over 30 years and while it has been a great system, it is now being phased out by Agfa. At Hudson's we think the alternative, the Xanté CTP together with Agfa Laserlink and Agfa P51 metal plates, gives you even greater flexibility to further improve your production. This system is designed for press sizes up to GTO 52. Contact our Sales Department now for further information or ask us to suggest other options to suit your business.

FAUST & VIRKO

THERMOGRAPHIC POWDERS FOR RAISED PRINTING

The most widely used powders in the world.
Sold in Australia by A.E. Hudson & distributors.

Faust Hiflo

A clear neutral powder that is low melt and free flowing. Raises to a smooth finish in the same colour as the ink that is used.

Hiflo Grades

290-1009

For broad and solid areas and type sizes from 36 point upwards.

290-1011

For small solids such as logos and type sizes from 27 point to 42 point.

290-1014

The standard grade for most thermo work, suitable for type from 11 point to 30 point.

290-1018

For delicate detail and fine serifs. Suitable for type sizes from 6 point to 14 point.

Hiflo is also available in matte finishes against special order by contacting Hudson's.

Metallics

Two types are available:

Standard Metallic Types

Opaque shellac-based resin available in permanent gold and permanent silver. For high gloss lustrous metallic effects.

Standard Metallic Grades

Hudson's carries the following types and grades in stock:

290-2011	for broad work	gold
290-2014	for most applications	gold
290-3011	for broad work	silver
290-3014	for most applications	silver

Other grades in metallic gold and silver are available on special order from Hudson's.

Pearlescent/ Non Metallic

Free flowing, translucent powders where the shade changes with different colour inks. Excellent substitute for metallic gold and silver powders because of less complications in production.

Strong (Non Metallic) Brass

290-4014

A non metallic powder that raises to an excellent gold over black ink or a glistening metallic orange over red ink. Many other effects are possible (standard grade).

Pearlescent Silver

290-6014

Raises to silver on black ink and a pink lustre on red ink. Many other effects depending on base colour ink used (standard grade).

Pearlescent Gold

290-5014

Similar to the strong N.M. brass but raising to a deeper colour of gold when printed over black ink (standard grade).

Pearlescent powders are manufactured in a range of colours that are available against special order. Fluorescent coloured powders are also manufactured by Faust and available against special order from Hudson's.

Laser Safe Thermographic Powder

Sun-Kure is guaranteed not to melt in any laser printer or high speed copy machine so it is ideal to use for raised letterheads. Sun-Kure laser safe powder must be used in purpose-designed, fully automatic machines such as SUNRAISE equipment.

The standard grade of #614 is available from Hudson's in 1 Kg (**290-8014**) and 10 Kg (**290-8014-10**) sizes.

PROFESSIONALLY PRESENT YOUR FINISHED PRINTING IN A SHRINK WRAPPED PACKAGE

With a Low Cost Machine From Hudson's \$470* Complete

- Includes bonus roll of film, 600 metres x 450 mm wide
- Seals and shrinks
- Easy to use
- Protects your jobs from moisture

600mm Wide Model complete with Free Roll Only \$595* plus GST

TECH TIP #4

PAPER DRILL BITS
Hollow metal drills will break..

It stands to reason that a bit which has rusted inside the bore is weakened and will break much more easily than one in good condition. To prevent these rust breaks, clean the drill bit after use by removing paper pellets and then soaking in a light oil. Sharpening it before applying the oil is also good idea. You will then have a clean, sharp bit ready for the next (urgent!) job. Hudson's has drill bits for almost every make of paper drill.
